

Goatweed (*Aegopodium podagraria*)

Velvet tree (*Miconia calvescens*)

Asian sand sedge (*Carex kobomugi*)

Cotton grass (*Imperata cylindrica*)

Wineberry (*Rubus phoenicolasius*)

Multiflora rose (*Rosa multiflora*)

Fire tree (*Morella faya*, previously *Myrica faya*)

White poplar (*Populus alba*)

Spotted knapweed (*Centaurea biebersteinii*)

Kudzu (*Pueraria montana* var. *lobata*)

Fiveleaf akebia (*Akebia quinata*)

Yellow starthistle (*Centaurea solstitialis*)

Strawberry guava (*Psidium cattleianum*)

English ivy (*Hedera helix*)

Japanese Barberry (*Berberis thunbergii*)

Mile-a-minute (*Persicaria perfoliata*, previously *Polygonum perfoliatum*)

Black locust (*Robinia pseudoacacia*)

Climbing euonymus (*Euonymus fortunei*)

Giant reed (*Arundo donax*)

Asiatic colubrina (*Colubrina asiatica*)

Carrotwood (*Carpenteria acanthodes*)

PCA Alien Plant Working Group

Is English ivy smothering your grass and trees and creeping towards your home? Is mile-a-minute weed marching over your wildflowers and threatening you with its devilish hooked spines? Are exotic bush honeysuckles consuming your native landscape? Scary? Yes, invasive plants are frightening! Where can you find information on how to stop these dangerous plants from taking over your world? Calm down. Help is just around the corner at the *Weeds Gone Wild* website. Volunteer expert-written fact sheets include photos, plant descriptions, ecological threat, U.S. distribution and habitat, biology and spread, management options, expert contacts, suggestions for native plants and non-invasive substitutes for landscaping, and references.
